

IN THE SPECIFICATION

Please replace the paragraph at page 14, lines 18-23, with the following rewritten paragraph:

When, in above-mentioned step ST14, determining that the mobile station is receiving data, via dedicated physical data channels, from ~~two~~ one or more sectors, the candidate selecting unit 7, in step ST16, selects, as a candidate, a sector ID specifying a sector whose received power of the common pilot channel is the strongest one of those measured in step ST11.

Please replace the paragraph at page 16, lines 25-29, with the following rewritten paragraph:

When determining that the mobile station is receiving data via a dedicated physical data channel from ~~two~~ one or more sectors, a candidate selecting unit 7, in step ST23, selects, as a candidate, a sector whose received power of the common pilot channel is the strongest one of those measured in step ST21.

Please replace the paragraph at page 20, lines 10-19, with the following rewritten paragraph:

The above-mentioned processes of steps ST31 to ST36 are performed for each of some sectors or all sectors listed in the sector selection candidate table, and the candidate selecting unit 7, in step ST37, determines whether any sector which has been selected as candidates for site selection diversity transmit power control exists. When determining that ~~two~~ one or more sectors which are candidates for site selection diversity transmit power control exist, the candidate selecting unit 7, in step ST38, selects a sector whose received power of the common pilot channel is the strongest from the one or more sectors.

Please replace the paragraph at page 24, lines 6-22, with the following rewritten paragraph:

The above-mentioned processes of steps ST41 to ST48 are performed for each of some sectors or all sectors listed in the sector selection candidate table, and the candidate selecting unit 7, in step ST49, determines whether any sector which has been selected as candidates for site selection diversity transmit power control exists. When determining that ~~two~~ one or more sectors which have been selected as candidates for site selection diversity transmit power control exist, the candidate selecting unit 7, in step ST50, selects a sector whose received power of the common pilot channel is the strongest from the two or more sectors. When, in above-mentioned step ST49, determining that no sector has been selected as candidates for site selection diversity transmit power control, the candidate selecting unit 7, in step ST51, selects two or more sector ID numbers specifying two or more sectors which the mobile station will request transmission of data via dedicated physical data channels thereof.
